

Student Term Planner UI

Student Term Planner UI

The Student term planner UI was created to help the administrator review the terms the student attends the school and to manually update student terms as needed.

The Student Term Planner UI is a two-level nested table with the student on the primary row. Using the plus button PEMS add a related student term record.

The following Student information is mapped to the student term record: Student Name.

Student Program is not mapped because the different student terms have potentially different programs

When the user selects the school term, PEMS concatenated the name of the student term name field, so the student term name is not directly entered by the user.
